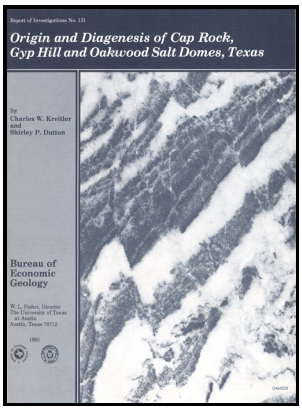
Natural strain in diapiric and glacial rock salt, with emphasis on Oakwood Dome, East Texas

Bureau of Economic Geology, University of Texas at Austin - RI0143D. Natural Strain in Diapiric and Glacial Rock Salt, with Emphasis on Oakwood Dome, East Texas



Description: -
-
Salt domes -- Texas, East.
Glacial epoch -- Texas, East.
Diapirs -- Texas, East.
Rock deformation -- Texas, East.Natural strain in diapiric and glacial rock salt, with emphasis on Oakwood Dome, East Texas
-
Points. Roman -- R411
no. 143.
Report of investigations (University of Texas at Austin. Bureau of Economic Geology) ;
no. 143
Report of investigations ;Natural strain in diapiric and glacial rock salt, with emphasis on Oakwood Dome, East Texas
Notes: Bibliography: p. 70-74.
This edition was published in 1985

Filesize: 39.97 MB

Natural Strain in Diapiric and Glacial Rock Salt, with Emphasis on Oakwood Dome, East Texas (Bureau of Economic Geology Report of Investigations No. 143). by M. P. A. Jackson

Natural strain in diapiric and glacial rock salt, with emphasis on Oakwood Dome, East Texas by Bureau of Economic Geology, University of Texas at Austin Download PDF EPUB FB2 His work has been supported by the World Bank, USAID, DOE, DOA, and the Electric Power Research Institute. Flinn diagram showing triangles of discrepancy between results obtained by different methods of strain analysis on the same specimen 42. Natural Strain in Diapiric and Glacial Rock Salt, with Emphasis on Oakwood Dome, East Texas - Downloadable PDF RI0143D.

Natural strain in diapiric and glacial rock salt, with emphasis on Oakwood Dome, East Texas

Three-dimensional strain parameters from Oakwood Dome salt core obtained by three different methods 5. Natural Strain in Diapiric and Glacial Rock Salt, with Emphasis on Oakwood Dome, East Texas RI0143.

Natural strain in diapiric and glacial rock salt, with emphasis on Oakwood Dome, East Texas

Closed interference structures are sheath folds formed by intense constriction of originally gentle fold culminations and depressions. Structural cross section along vertical salt core, Oakwood Dome, and transecting schistosity in the halite 27. Model showing theformation of vertical and near-vertical F 2 -F 1 sheath folds during D2 deformation by intense constriction of folds during diapiric rise of rock salt 20.

Natural Strain in Diapiric and Glacial Rock Salt, with Emphasis on Oakwood Dome, East Texas

However, it is reported to be an aromatic polyurethane elastomer with strainn and soft segments Garber, 2005. Label Natural strain in diapiric and glacial rock salt, with emphasis on Oakwood Dome, East Texas Title Natural strain in diapiric and glacial rock salt, with emphasis on Oakwood Dome, East Texas Statement of responsibility M.

[PDF] Natural Strain In Diapiric And Glacial Rock Salt With Emphasis O

Natural Strain in Diapiric and Glacial Rock Salt, with Emphasis on Oakwood Dome, East Texas, by M. To purchase this publication in book format, please order.

Natural strain in diapiric and glacial rock salt, with emphasis on Oakwood Dome, East Texas

Deducing the orientation of a fold axis from the trace of layering in a schistosity plane 28.

RI0143D. Natural Strain in Diapiric and Glacial Rock Salt, with Emphasis on Oakwood Dome, East Texas

Statement Bureau of Economic Geology, University of Texas at Austin Publishers Bureau of Economic Geology, University of Texas at Austin Classifications LC Classifications 1985 The Physical Object Pagination xvi, 81 p.

Natural strain in diapiric and glacial rock salt, with emphasis on Oakwood Dome, East Texas

Structural evidence indicates truncation of the diapir crest, probably by ground-water dissolution during cap-rock formation. Structural evidence indicates truncation of the diapir crest, probably by ground-water dissolution during cap-rock formation. When the temperature is recorded, hypothermia can be missed if the thermometer does not measure low temperatures.
