Where the Heart Is (TV Series 1997–2006)

The endocardium is very smooth and is responsible for keeping blood from sticking to the inside of the heart and forming potentially deadly blood clots. It is made up of two numbers: and. To facilitate this filling, the AV valves stay open and the semilunar valves stay closed to keep arterial blood from re-entering the heart.

Human Heart

Blood pressure increases in the major arteries during ventricular systole and decreases during ventricular diastole.
