## Bushveld Igneous Complex

Geocongress '90 Cape Town, South Africa Abstract nos.

## THE SOUTH AFRICAN TRANSVAAL AQUIFER

Stow Over and above my passion for railway carriages I have always been fascinated by the operating history of our locomotives. This can only be achieved as part of a holistic approach. Here Van Schoor took over for the single track bottleneck around the mountain where CTC took over again at Blinkpan and Broodsnyerplaas.

## Sequence stratigraphy of the Vaal Reef facies associations in the Witwatersrand foredeep, South Africa

Kendal had an island platform and, as was typical SAR practice, the signal cabin was on the platform in the main station building, in this case facing south on to the Up westbound track. The General Manager has written to me from Capetown his spelling on the question of the distribution of engines and calling attention to a complaint made by the Chief Railway Storekeeper in regard to the cost of keeping duplicate and triplicate spares where engines of one class are spread over the Union. From 1975 to 2013, the autocatalytic and jewellery industry dominated the market with more than 70% of the gross demand.

## Largest Gold Deposits in the World

Transport of coal in side or bottom discharge wagons led to a lot of coal fouling of the ballast particularly with the shaking and impacts that occurred when negotiating point work.

## An overview of the geology of the Transvaal Sequence and Bushveld Complex, South Africa

Pebble roundness, too, varies greatly and apparently randomly. Chromite subhedral to subrounded less than 0. Ancient river systems feeding into the basin eroded the surrounding highlands and over a period of about 260 million years, deposited layers of quartz pebble conglomerates,

sandstones and shales.

But, as explained at our interview, the position in Natal was such as to call for the exercise of every ready measure which would lend immediate assistance to a section of the line where traffic was offering in greater quantities than we could handle, and this at a time when the necessity for obtaining all the revenue possible was never more urgent. This photograph of the station was taken on 1 May 2007 during the transition from semaphore signalling to CTC colour lights and, for as long as the semaphores were still operational, the station was kept in reasonably good condition compare this scene with that depicted in the 1950s SAR photo 18 above. Entries for Maps and atlases were issued separately 1953-1955.

### **SOUL OF A RAILWAY PART 21**

Phase 4-During this phase a survey team will measure the accurate positions of the surveyed boreholes captured in phase one with regards to its x, y and z position in Cartesian and geographical coordinates.

### **An overview of the geology of the Transvaal Sequence and Bushveld Complex, South Africa**

As a whole, it is possibly one of the largest resources in terms of platinum group elements, larger than the overlying Merensky Reef.
