Line Up! To Reverse Hearing Loss, New Hair Cells Need to Stand in Formation

Table of Contents: Overview: Regeneration and repair Richard J.

Regenerate & Repair

These observations support that mitochondrial Ca^{2+} uptake plays a critical role in noise-induced synapse loss. The trial was undertaken on 88 individuals with normal hair conditions, across all genders.

Regenerate & Repair

Outer hair cells exist in a Y-shaped formation that is repeated thousands of times across the cochlea. Exposures stimulus parameters: 60 Hz, 46.

Hair Cell Regeneration, Repair, and Protection on Apple Books

The iHCs also possessed several other distinct characteristics of hair cells, including vulnerability to an antibiotic known to cause hearing loss. The fixable vital dye FM1-43FX Invitrogen was used to quantify hair-cell mechanotransduction as previously described. One mechanism by which Ca^{2+} is taken up by mitochondria is via the mitochondrial Ca^{2+} uniporter MCU;.

Basilar papilla explants: a model to study hair cell regeneration

Ethics Statement The animal study was reviewed and approved by Washington University School of Medicine Institutional Animal Care and Use Committee and in accordance with NIH guidelines for use of zebrafish. Using computer simulation in a mouse cochlea, the researchers showed that outer hair cells can do their job only if they are part of this Y-shaped formation.
