### What Is Geomorphology?

Post, photos, and illustrations by Victoria Race This semester, the Geomorphology class from the College of Wooster Earth Sciences department went to several local field sites to study geomorphological features, soil catenas, groundwater flow, etc. It was thought that could then start the cycle over.

#### geomorph\_intro

Fields Within Geomorphology The specific field a geomorphologist studies in depends on the concentration. These may range from 3 m 10 feet in diameter and less than a metre deep to several kilometres in diameter and several hundred metres in depth.

#### Fluvial Geomorphology

This was based on his observation of shells in a of a mountain hundreds of miles from the.

Processes That Change The Earth A geomorphologist studies processes that shape the surface of Earth. Land features have been created, destroyed, and changed through millions of years worth of physical processes. The action of volcanoes tends to rejuvenize landscapes, covering the old land surface with and , releasing material and forcing rivers through new paths.
