Eyelid Infection

Chlamydiaconjunctivitis or trachoma was once the most important cause of blindness worldwide. Newborn infants are particularly prone to bacterial attachment.

Branhamella catarrhalis colonization of exposed nylon sutures

It is imperative that this material be removed.

External Infections of the Eye.

This usually is done if vision loss is so severe that the person is nearly blind.

External infections of the eye : bacterial, viral, and mycotic

In this case, images in the distance are blurry, but images nearby are clear. In serious cases, the sty may need to be lanced by an ophthalmologist or even surgically removed. One can use honey directly into the eyes or make honey eyewash for the treatment of eye irritation.

Diagnosis and Testing of Fungal Eye Infections

Infectious , or pink eye, is one of the most common eye infections.

Diagnosis and Testing of Fungal Eye Infections

However, viruses and bacteria may also cause skin conditions and rashes.
