Healthcare Facility Design & Construction Resources

Not only has this case fallen out for performance measures but it will also have difficulty standing up in court. This can lead to unexpected political debate for unsuspecting travelers! Canadians bristle if their system comes under criticism from outsiders though they reserve the right to complain enthusiastically with their neighbors! It encompasses information governance, patient identification, authorship validation, amendments and record corrections as well as auditing the record for documentation validity when submitting reimbursement claims. Looking for guidance to support a clinical decision? Since these documents are often used and exchanged, the importance of accurate and quality documentation in EHR systems is critical.

Guidelines

The 2013 CCPGs summarize the evidence from approximately 300 randomized controlled trials in the area of critical care nutrition since 1980.

CPG Infobase: Clinical Practice Guidelines

To support EBP, several critical care and government organizations, including the American Association of Critical-Care Nurses, the Society of Critical Care Medicine, the American College of Chest Physicians, the American Heart Association and the Agency for Healthcare Research and Quality, have developed position statements and clinical practice guidelines. The organization has policies and procedures that define the management of extensive privilege assignment and control features. This results in greater quality of care and decreased costs.

Integrity of the Healthcare Record: Best Practices for EHR Documentation (2013 update)

The organization has policies that define retention periods and procedures for log records. These features, although they are time-savers, are dangerous to the organization and the individual practitioner because they foster the ability to commit fraud, intentionally or unintentionally. American Recovery and Reinvestment Act of 2009, Title XIII: Health Information Technology Section 13001.

OEM Practice Guidelines

Best practices for documentation that ensures quality have not been well defined for EHRs and are not well understood by providers. Another is the lack of resources for Indigenous Canadians.
