Case Studies

Majors students engage in a team project in collaboration with a community partner organization, while honours students undertake an individual research project with a faculty supervisor. For example, you might require that team members document their assumptions, or state the basis of their estimates, as part of the planning process.

EHS for Mining Industry Companies and Suppliers for the ...

But the largest projects, simply by their nature, can dramatically affect total dollar volumes. Authorization under the Water Sustainability Act which allows you to use freshwater, or to work in or around freshwater. People problems require people solutions and that leads directly to stakeholder management.

Case Studies

Setting Expectations Once the project team has decided how to address the various concerns of the stakeholders, the next step is to go about setting and managing the expectations of these stakeholders.

Reclamation & Closure

Prior projects lists of stakeholders d.

Natural Resources Conservation on UBC's Vancouver campus

The five principal technologies used to monitor and control water flow at mine sites are diversion systems, containment ponds, groundwater pumping systems, subsurface drainage systems, and subsurface barriers. The contamination of watersheds resulting from the leakage of chemicals also has an effect on the health of the local population.

Managing environmental requirements for new mine developments in British Columbia

These documents were prepared by experienced bat biologists, with input from user groups, industry, biological consultants, ministry staff, researchers and members of the BC Bat Action Team. The movement seeks to attain racial justice for African-Americans and those who identify as black.
