A New Atlas of the Kent Flora

Other species in the community may include *Alisma plantago-aquatica*, *Carex acuta*, *Glyceria fluitans*, *Iris pseudacorus*, *Juncus effusus*, *Oenanthe crocata*, *Phalaris arundinacea* and *Rorippa amphibia*. The fruit is a compound drupe, dark purple, almost black.

Dynamic Pages

Unlike Alemgono, Doli wetland has high bird species richness, evenness, and low dominance.

Assessment of wetland flora and avifauna species diversity in Kafa Zone, Southwestern Ethiopia

Cite this article DOUGALL, T.

New Atlas of the Kent Flora (2010) reprint

It identifies changes in plant distribution since the last major survey held between 1971 and 1980. Flowers are usually pink, sometimes white. Additional observations on the occurrence and distribution of benthic macroalgae have been made by 1982, 1983, unpublished data.

A study of species richness and diversity in seed banks and its use for the environmental mitigation of a proposed holiday village development in a coniferized woodland in south east England

Sea spurge Status: not scarce This species is most characteristic of free-draining mobile or semi-stable sand dunes and may also be found along the drift line on sandy foreshores. A hardcopy can be purchased from the. Biodiversity and Conservation 6, 1413—1428 1997.

Kent, v.cc. 15 & 16

It is often associated on foreshores with such species as *Cakile maritima* and *Salsola kali*.

A New Atlas of the Kent Flora

In Britain and Ireland it is a plant of hedges and woodland edges on calcareous soils.
