The Deep Rig (2021)

If a PEG is felt unsafe to do, then we suggest a RIG instead, which can be performed without sedation and sat up. As a result sedation is required, and patients need to be able to lie comfortably flat for 30 minutes. To have a RIG, X-rays are used to locate the insertion site.

RIG Stock

People sometimes worry that it might smell, but this is not the case at all — remember that the mouth is connected to the stomach through a similar, just longer tube and is open to the outside world. A PEG is inserted using a telescope down the food pipe.

Rigs

This formula is applicable to all age groups, including children.

Rig Definition & Meaning

We assess this by measuring the FVC sitting and lying down. As the operation for a PEG requires a person to be under sedation and lying down, it is safer and more comfortable if the procedure takes place when FVC lung capacity is 50 percent or above.
