

Statin therapy / HMG Co-A reductase inhibitor treatment in the prevention of coronary heart disease

Trent Institute for Health Services Research - HMG CoA reductase inhibitors (statins) to treat Epstein

Description: -

- Statin therapy / HMG Co-A reductase inhibitor treatment in the prevention of coronary heart disease

-

Guidance note for purchasers -- 96/04 Statin therapy / HMG Co-A reductase inhibitor treatment in the prevention of coronary heart disease

Notes: At head of cover title: Working Group on Acute Purchasing.
This edition was published in 1996

AtorvaSTATin (Professional Patient Advice)

Abstract Context Plasma levels of the inflammatory biomarker C-reactive protein CRP predict cardiovascular risk, and retrospective studies suggest that 3-hydroxy-3-methylglutaryl coenzyme A reductase inhibitors statins may lower CRP in a manner largely independent of low-density lipoprotein cholesterol LDL-C. Ornish D, Scherwitz LW, Billings JH, Brown SE, Gould KL, Merritt TA, et al. Colchicine may increase the serum concentration of HMG-CoA Reductase Inhibitors Statins.

Concomitant Medications

Consider therapy modification Dabigatran Etexilate: AtorvaSTATin may decrease the serum concentration of Dabigatran Etexilate. Epstein—Barr virus-transformed B cells grow in tight clumps in vitro.

DailyMed

Monitor therapy Bexarotene Systemic : May decrease the serum concentration of AtorvaSTATin. The trial results showed that patients in this trial also gained additional benefits from taking a statin.

AtorvaSTATin (Professional Patient Advice)

Monitor therapy Letemovir: May increase the serum concentration of AtorvaSTATin.

HMG

Cell death induced by simvastatin was due to apoptosis as demonstrated by detection of fragmented DNA. Epstein—Barr virus-transformed B cells express LFA-1 and ICAM-1 adhesion molecules on their surface A. Among patients in the primary prevention cohort randomly allocated to

receive pravastatin, median CRP levels declined by 0.

DailyMed

There have been rare reports of immune-mediated necrotizing myopathy IMNM , an autoimmune myopathy, associated with statin use. Rifabutin and fluvastatin, or possibly pravastatin, may pose lower risk. Large trials of simvastatin for the prevention of coronary events have evaluated the incidence of cancer in study recipients.

HMG CoA reductase inhibitors (statins) for people with chronic kidney disease not requiring dialysis

Physicians considering combined therapy of atorvastatin with any of these drugs should carefully weigh the potential benefits and risks and should carefully monitor patients for any signs or symptoms of muscle pain, tenderness, or weakness, particularly during the initial months of therapy and during any periods of upward dosage titration of either drug.
