These are personal and policy suggestions that we and others study. Different projections of the future human world population Human or human population overshoot is a human population that is too large to be by its environment in the long term.

The world population explosion: causes, backgrounds and projections for the future

Michael Rosenzweig

A lot of people usually see the forest as being without value just because the resources of the forest are not in use, for people like this; the profits of deforesting usually outweigh the profits of keeping the forest. Well, the answer is embracing a nature-friendly lifestyle and shifting to renewable and sustainable energy resources like solar power, wind, and hydropower, we can at least slow down the depletion of natural resources. Overpopulation places competitive stress on the basic life sustaining resources, leading to a diminished quality of life.

And replenish the earth : the evolution, consequences, and prevention of overpopulation.

Periodic oscillations in an ideal-free predator-prey distribution.
