Message from the Department Head

There is a famous gap in the stratigraphic record of the Grand Canyon of 900 million years between Proterozoic granitic rocks and marine sediments. Arizona minerals are of popular interest, and Arizona mineral specimens are especially apparent in collections and museums throughout the world.

Mining and Geological Engineering

The , west of Casa Grande, and the to the north of Flagstaff both formed in basins, extruded in the last five million years.

Arizona has highest rate of COVID

Additionally, metamorphism created some skarn type deposits. The safety record and reclamation successes of modern uranium mining have been heralded by regulators and industry.

Mineralogy of Arizona

Between 1915 and 1983, an estimated 81 million acre feet of groundwater was pumped in the vicinity of Phoenix, to complement surface water from the Salt River, Verde River and Agua Fria River.

Mineralogy

At first glance it is brown and uninteresting. Information about ore minerals, gem materials and rock-forming minerals.
