In Russia, for example, the number of households with a microwave grew from almost 24% in 2002 to almost 40% in 2008. HIGH VOLTAGE MUST BE CAREFULLY OBSERVED.

Therefore, freeze-drying is often reserved for materials that are heat-sensitive, such as , , , and. Behind the front panel, the control circuit board is attached.

Freeze Dehydration

Visible light, microwaves, and radio frequency RF radiation are forms of non-ionizing radiation. In the end drying stages the product temperature rises above 0°C, because when only little moisture is left inside the product the boiling point loses its influence on the product temperature.

Application of Microwave Plasma

The GPWA assumes an isolated dielectric material and four different plane waves propagating toward the center of the material, from different orthogonal angles and considers the reflections at the dielectric—air interface. The microwave generator, turntable motor, lamp, sounder and fan each require single line OUTPUTS from the microprocessor.

RF Dielectric Heater circuit design

Microwaves are a form of with a higher than ordinary but lower than. However, since the 1960s, planar transmission line circuits or planar circuits, which are referred to as two-dimensional flat-surface layered topologies have been the more popular choice.
