FBI Crime Scene Photographer Opens Up About Job

By shining the light on evidence from different angles you can see where it is best to position the electronic flash for a photograph.

FBI Crime Scene Photographer Opens Up About Job

In this article, we discuss what a crime scene photographer does and what skills they have, what kind of salary they make and steps you can take to become a crime scene photographer.

Forensic photography

Therefore, by placing a specially designed filter over the camera lens, one which will only allow a specific wave-length of UV light less than 400 nanometers , we can expose the film to only this light.

Importance of forensic photography in a crime scene investigation: [Essay Example], 2301 words GradesFixer

The simple action of depressing the shutter control will cause the camera to vibrate, losing focus of the subject matter. While it is the job of many other photographers to interpret a brief, it is the job of the Forensic Photographer to produce accurate, detailed photographs that faithfully record the location and evidence as clearly and as objectively as possible.

ZOMEi IR Filter GLASS Infrared X

Many photographs, especially photographs of certain types of evidence, cannot be photographed with the flash mounted on the camera. There should always be a scale or ruler present. These photographs are often important in the piecing together of an event so that officers who were not able to attend the scene can get an understanding for how it looked.

FBI Crime Scene Photographer Opens Up About Job

Since the subject matter often relates to the accident, injury or criminal investigations, Forensic Photographers will be expected to be able to work

efficiently in distressing and challenging environments, without disturbing other evidence or interfering with the work of other investigators. Accident scene pictures should also be identified and sourced, police photographs taken at the scene often being used in civil cases.

FBI Crime Scene Photographer Opens Up About Job

Crime-lite MLD Fingerprint Imaging Accessory An innovative new accessory for use with the Crime-lite Imager and DCS fingerprint Imaging systems, the Cylindrical Surface Un-wrapper CSU enable the forensic examiner to extract 2D images of fingerprints from a 3D cylindrical surface. There is no advantage in using color film when taking UV photos.
