## Five Types of International Cooperation for Missile Defense

Strategically coordinated investments, whether on a bilateral or regional basis, may also play a part. Norway, Finland, Oman, Spain, the Netherlands, Chile, and the United States have already deployed the system.

## Air Pollution and Sea Pollution Seen from Space

Missile Threat is a product of the at the Center for Strategic and International Studies. It is one of the most important applications of operational oceanography. More than 400 NH 3 point and extended sources have been identified worldwide, and this study showed that emissions from known sources are largely underestimated by emission inventories.

## 2021 Air, Space & Cyber Conference

Due to microwave properties, SAR measurements do not depend on weather or cloud cover, and slicks have significant backscattering behaviors that can be highlighted by SAR systems. As partner programs move forward, the United States should work with these countries to ensure their defense systems are interoperable with U. Japan has equipped four Kongō-class destroyers, two Atago-class destroyers, and one Maya-class destroyer with an additional destroyer in development with the Aegis Combat System, with the goal of deploying a total of eight BMD-capable ships by 2021.

## PacNet #25

US policymakers should not overlook the chance of productive talks for crises in other domains, including on land and in nuclear, space, and cyber, where the rules are more ambiguous and both sides have reasons for restraint.

## Sea

Thanks to the development of the technologies of satellite remote sensing, which began in the 1970s, tremendous advances have been achieved on large-scale oceanographic phenomena that lead to significant contributions to ocean and climate research for instance. Size of PM varies, from a diameter of less than 10 microns PM 10 to 2.
