## Assessing the Impact of Power Plant Mortality on the Compensatory Reserve of Fish Populations

This concept reconciles the observed distinctness of different populations, the existence of both natal homing and straying by individuals, and the varying extent of genetic differentiation among populations. Study validity assessment Validity assessments were conducted for 128 individual projects identified from the 264 studies included Additional file. Management of the Peruvian anchoveta resource, by Andreas A.

## CSIRO PUBLISHING

In the historical simulation, a shift was detected in 196 after an approximate 5-year regime period and there is no regime shift in 1977 Fig.

## Digestion of larval American shad by cyprinids, Ecology of Freshwater Fish

The original RSI always returns a positive value if the regime shift is up or down. If a study contained more than one project i.

## Application of Enclosures to Studies on the Early Life History of Fishes

Error bar represents the standard error. Fishery Investigations, Series II, 19: 1—533.
