Brown : Stable isomorphism of hereditary subalgebras of \mathcal{K}^*

Segal recognized the construction that was implicit in this work and presented it in sharpened form. For separable Hilbert spaces, it is the unique ideal. I do not believe that at all.

Unitary representations of solvable Lie groups

$\{f_K\}$ K is an approximate identity. However, you must be careful when using pointers in order to get or set the value located at the pointed memory address.

The smallness problem for C^*
