The best known neoclassical model is the one of Feder-Ram, developed by Biswas and Ram in 1986, and adapted by Feder a few years later. An early specialized work in the field is the report The Economics of Defense in the by and 1960, also published as a book. While the primal goal is to find the optimal size of the defense budget with respect to sizes of other budgets managed by the public body, the field also studies the optimization of allocation among specific missions and outputs such as arms control, disarmament, civil defense, searift, arms conversion, mobilization bases, or weaponry composition.
