### The Crucial Distinction between “Unmet Need” and “Unmet Demand” by William N. Ryerson

We conducted descriptive, survival and multivariate Cox regression analysis of the influence of women's baseline measures of unmet need, self-reported intention to contracept and their concordance with time to adoption of modern contraception over 36 months. This group is more numerous than the 430 million men and women classified as having an unmet need for family planning, and they deserve a lot of attention via programs that role model the benefits of smaller family norms. More importantly, unmet need is a complex construct that may not be properly reflected through interview since it depends on individual perception of need for contraception and pregnancy.

### Use of Contraception and Attitudes towards Contraceptive Use in Swedish Women

Likewise, users who want to delay childbearing are also significantly less likely to experience a pregnancy in the follow-up period OR: 0.

### Unmet need for contraception and its association with unintended pregnancy in Bangladesh

This prompted even those who were not experiencing the same to discontinue out of fear. Findings of the analysis indicate a suboptimal utilization of contraception as about one-third of the eligible women were found to be non-users any contraceptive measures.

### The unmet needs for modern family planning methods among postpartum women in Sub

The major limitation of the survey is that many women could not be contacted and therefore were replaced by other women in the same age category. Survey research in developing countries estimates that more than 150 million married women of reproductive age have an unmet need for contraception. Unintended pregnancy: consequences and solutions for a worldwide problem.

### The unmet needs for modern family planning methods among postpartum women in Sub

Stopping and switching contraceptive methods: findings from Contessa, a prospective longitudinal study of women of reproductive age in England. The role of education in improving maternal and child health cannot be overemphasized.

### **Measuring unmet need for contraception as a point prevalence**

Background Addressing the unmet need for modern contraception underpins the goal of all family planning and contraception programs. So that is why I stopped using.

### **The Crucial Distinction between “Unmet Need” and “Unmet Demand” by William N. Ryerson**

Engaging men and other social influencers in family planning programs and services will help garner support for contraception, rather than focusing exclusively on women.
