The Upshot

It pulled out all the stops in trying to get patients who had a heart attack to be more compliant in taking their medication. Medical treatment is an example of a credence good: only the physician knows the appropriate treatment, the patient does not. But those excited about the potential of behavioral economics should keep in mind the results of a.

The Economics of Physician and Patient Behavior

These included treatments for H.

How healthcare organizations can use behavioral economics to get desired results from patients and staff

The researchers in this trial deserve praise for their frank assessment of their results, as well as for trying to in which they might achieve success in the future.

Medical insurance and free choice of physician shape patient overtreatment: A laboratory experiment

If you know of missing items citing this one, you can help us creating those links by adding the relevant references in the same way as above, for each refering item. We find that with insurance, moral hazard looms on both sides of the market: patients consult more often and physicians overtreat more often than in the baseline condition.
