Trump's speech on energy policy goes off the rails

Our nation's independence of economic and political action is becoming increasingly constrained.

Remarks by the President at National Clean Energy Summit

It will demand that we make sacrifices and changes in every life. We've let the fears of thirty years ago, and an endless political squabble over the storage of nuclear spent fuel make it virtually impossible to build a single new plant that produces a form of energy that is safe and non-polluting.

April 18, 1977: Address to the Nation on Energy

We harnessed nuclear energy, mapped the human genome, created the Internet and pioneered integrated circuits that possess the computing power of Apollo spacecraft on a single silicon chip you can barely see. You may not be able to buy as many groceries.

November 8, 1977: Address to the Nation on Energy

Secretary Ken Salazar of the Interior Department. As long as petro-dollars flow freely to them those regimes have little incentive to open their politics and economies so that all their people may benefit from their countries' natural wealth.

Speech on Energy Policy

And I want to talk a little today about the direction I want to lead us and why. The oil and natural gas that we rely on for 75 percent of our energy are simply running out. We will use research and development projects, tax incentives and penalties, and regulatory authority to hasten the shift from oil and gas to coal, to wind and solar power, to geothermal, methane, and other energy sources.

April 18, 1977: Address to the Nation on Energy

Our national energy plan is based on ten fundamental principles.

Speech on Energy Policy

It's a problem that we will not be able to solve in the next few years, and it's likely to get progressively worse through the rest of this century. Part of the reason I went down there is to talk about energy with the Brazilians. In the coming months, other proposals will be offered to establish a national climate policy.
