Influenza Virus (Flu)

Data from March 2009 to December 2011 is used for model fitting, while data from January 2012 to August 2012 is used for validation. It was far more common for LHDs to use the ICS structure and reporting process intermittently, often

reverting to their day-to-day structure and reporting for managing the response.

Influenza Pandemic of 1918

Cowling, University of Hong Kong, Hong Kong Received: December 26, 2012; Accepted: April 13, 2013; Published: May 30, 2013 Copyright: © 2013 Yuan et al. Content and interpretive analyses were conducted using ATLAS.

Monitoring Influenza Epidemics in China with Search Query from Baidu

Characterization of mutants of influenza A virus selected with the neuraminidase inhibitor 4-guanidino-Neu5Ac2en. Worldwide, the minimum estimated mortality was 21 million people, with the real number easily reaching 30 to 40 million Crosby, 1989.

80 years ago today: MRC researchers discover viral cause of flu

The Spanish flu pandemic, from 1918 to 1920, claimed 100 million lives. Overall mortality was also lower in cities that implemented early

interventions, but the effect was smaller.

Computational screen and experimental validation of anti

In the United States, angina emerged as a significant cause of death in the mid-1920s Stallones, 1980.

Past Pandemics

We review recent discoveries about vitamin D's effects on innate immunity, human studies attempting sick-to-well transmission, naturalistic reports of human transmission, studies of serial interval, secondary attack rates, and relevant animal studies.

Interestingly, the CPE results were consistent with neuraminidase activity assay that the quercetin and chlorogenic acid were effective at low concentrations of 1.

Cholera, John Snow and the Grand Experiment

An analysis of national hospital discharge data indicates an average of approximately 114,000 excess hospitalizations per year are related to influenza. The NIMR's success came so quickly only because so much had been put in place in the previous decade. As of February 2015, approximately 570 cases and 210 deaths have been reported to the WHO, mostly in China.
