Wadden Sea

After being completely extirpated from continental Europe mainly due to hunting, the grey seal returned to the Wadden Sea in the 1960s and has experienced high population growth rates. During Modern Times 1500—1800 ad , commercial fisheries further developed for rays, flatfish, lobster, and shrimp along the coast and for sturgeon and salmon in the estuaries. The two surveys that take place during the moult in March and April, provide information on the number of grey seals using the Wadden Sea.

Status of marine mammals in the North sea

Emerging Infectious Diseases, 10, 723-725. Washington DC: National Council for Science and the Environment.

Marine mammals

Protection and management requirements Maintaining the hydrological and ecological processes of the contiguous tidal flat system of the Wadden Sea is an overarching requirement for the protection and integrity of this property.

Rise and fall of fishing and marine resource use in the Wadden Sea, southern North Sea

Common Wadden Sea Secretariat, Wilhelmshaven, Germany. They are not only attracted by the high availability of food, but also by the lack mammalian predators and human disturbance on some of the islands and high sands.

Richly diverse

Verletzungen und Tötungen von Meeressäugern durch Schiffsverkehr. Rehabilitation A complete stop of the rehabilitation of pinnipeds in the Wadden Sea, i. The Wadden Sea is the world's largest intertidal ecosystem and one of the most productive coastal areas worldwide.

Rise and fall of fishing and marine resource use in the Wadden Sea, southern North Sea

In parallel to the growing numbers of moulting grey seals, the number of pups born in the region has increased. Assessment for harbour seals The

Wadden Sea population has been recovering from severe overhunting in the 20th century. Grey seals generally use the higher sandbanks in the Wadden Sea.
