

# Estimates of evapotranspiration in alkaline scrub and meadow communities of Owens Valley, California, using the Bowen-ratio, Eddy-correlation, and Penman-combination methods

U.S. Dept. of the Interior - Transpiration coefficients for three Great Basin shrubs

Method	PM	PM
Penman-combination method	0.70-0.85	0.80-0.90
Eddy-correlation method	0.80-0.90	0.90-1.00
Bowen-ratio method	0.80-0.90	0.90-1.00

USGS, CA

Sensitivity and subgroup analyses based on tumor type were performed to investigate the potential heterogeneity. Modification in the psychrometer constant of this method to account for differences between heat-diffusion resistance and vapor-diffusion resistance permitted actual ET to be estimated.

**Estimates of evapotranspiration in alkaline scrub and meadow communities of Owens Valley, California, using the Bowen**

Notwithstanding high  $\Omega$ , calcium carbonate growth did not occur on aragonite single crystals suspended PL surface water for several months. Some of the most comprehensive of these include works by Nadeau 1974, G. .

**US/IBP synthesis series; v. 2**

Near the top of the view near the horizon, the snow covered volcanic peak Mount Shasta can be seen. Furthermore, increased feelings of entitlement to partner-induced sexual pleasure and more frequent talking about sexuality with peers were associated with increased SDS endorsement among boys but not among girls. We concluded that there is an average negative correlation between ADC and SUV in patients with cancer.

**Water Resources of the Basin and Range Carbonate**

The majority of the lakes were dilute. All samples were analyzed for uranium and other elements.
