

Clinical simulations in pediatrics

Appleton-Century-Crofts - NurseThink®

Description: -

-
Host-virus relationships -- Congresses.
Mammals -- Diseases -- Congresses.
Viruses -- Reproduction -- Congresses.
Parvoviruses -- Congresses.
Anglo-Norman literature -- History and criticism.
Anglo-Norman dialect.
Ethnology -- New Guinea.
Pediatrics -- Programmed texts.
Pediatrics -- Case studies.
Pediatrics -- Problems, exercises, etc.
Clinical simulations in pediatrics
-Clinical simulations in pediatrics
Notes: Includes bibliographies.
This edition was published in 1979

Filesize: 33.55 MB

Simulation Training in the Pediatric Tracheostomy and Home Ventilator Population

Have you ever been hospitalized before? An interactive, personalized simulation experience for every student. Develop clinical decision-making skills, competence, and confidence in nursing students through vSim for Nursing Pediatric, co-developed by Laerdal Medical and Wolters Kluwer Health.

Clinical Simulation

Formative Evaluative Criteria See for the critical actions that are expected to be demonstrated by the two students who actively participated in the scenario. After the simulation, participants will be debriefed by the instructor, who will use a tape of their session as a teaching tool. The team must optimize the patient for transfer to definitive care.

Simulation for Clinical Preparedness in Pediatric Emergencies: A Pilot Study

The future vision of simulation in health care. End-of-life simulation experiences can assist nursing students in meeting the following QSEN competencies: a patient centered care, b teamwork and collaboration, and c safety.

Simulation for Clinical Preparedness in Pediatric Emergencies: A Pilot Study

If home invasive ventilation is anticipated, a home ventilator will be used. Have you ever had a stroke? Critical revision of the manuscript for important intellectual content: P.

NurseThink®

Students have access to suggested reading material from trusted Wolters Kluwer sources, pre-simulation and post-simulation quizzes, documentation assignments that can be used in Lippincott DocuCare, and guided reflection questions to promote reflection and help improve future performance. For general information, Anticipated count of 90 participants includes 30 patients and 60 caregivers 2 per patient. Future plans for using the telepresence technology in simulation include expanding interprofessional presence in simulation with medical, physical therapy, and divinity students.

Clinical Simulation

Enhancing teamwork, practicing effective communication, and transitioning to new roles are cornerstone objectives for many healthcare simulations regardless of the discipline Issenberg et al.

Simulation of Pediatric Life

Both active arms will occur in the simulation center or sleep lab and replicate the same clinical situations by the simulation instructor. Concerns regarding patient exposure and clinical risk during the COVID-19 pandemic will only exacerbate this problem. In areas where wireless connectivity was unreliable, the existing router signal was boosted.

Telepresence Robots for Pediatric Clinical Simulations: Feasibility and Acceptability.

The patient will then progress to having an unstable SVT. The patient is Jackie, a 13-year-old female in the hospital with a known diagnosis of sickle cell anemia who was admitted for a painful vasoocclusive crisis. From open-ended questions, several students reported that having exposure to what their future practice may be like with the integration of new technologies was a valuable experience and promoted their learning.
