## Multiple Primary Neoplasms

After execution has completed, Joinpoint opens an output window to display the results. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now considered malignant, deleted terms, and terms that changed behaviour code. This example is an analysis of trends in colorectal cancer incidence rates from 1993-2013 in the cancer registries.

## Standards for Reporting

Both are listed with the code in ICD-O-3. The pairwise comparison is only relevant if you have one or more By Variables defined on the Input File tab. Surgery of Regional Lymph Nodes Surgery of regional lymph nodes involves of lymph nodes that are considered to be regional to the primary site of cancer.

## SEER API Documentation

Each cytogenetic abnormality is unique. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable revisions of the non-Hodgkin lymphoma and leukaemia sections, based on the WHO Classification of Hematopoietic and Lymphoid Diseases. Metastases have been reported in some cystic pancreatic endocrine neoplasm CPEN cases.

## SEER API Documentation

Revisions in the morphology section were made in consultation with a large number of experts and were finalised after field-testing in cancer registries around the world.
