BREACH: An erosion model for earthen dam failures

Secondary and cascading impacts to roadways can create significant and widespread consequences.

Hazard Identification Report 2019

For example, dome building activity similar to the 2004-2008 episode may have no effect on that watershed, and it may not need to be addressed in detail. The Institute and the Study After years of effort to have the Floods formally recognized for their significance, the first procedural giant step came early in 1999, with the announcement by the National Park Service that funding for the Study of Alternatives had been secured through the Congressional appropriations process. Analyzing Flood features through an inventory system, the study addresses the suitability and feasibility of federal designation and assistance, as well as various options for forming partnerships and developing cooperative strategies.

4 Natural Hazards

Geological Survey, began studying the Scabland region near Spokane, Washington, and the intermountain basins of Montana in 1910.

Flood and Megaflood Processes and Deposits: Recent and Ancient Examples

Risk Analysis 37 3 :487—501; doi:10. Environmental Protection Agency, 32 pp. The status of anadromous fish habitat in the North and South Fork Toutle River watersheds, Mount St.

Spirit Lake dam

Bretz's second paper on the Scablands also discussed the mounded gravel deposits that were scattered throughout the area.
