### Pollution in the Mediterranean Sea. Environmental issues

Some species are accidentally transported in ballast water or attached the hulls of vessels and end up being released far from their origin. Their demise is bad news for marine biodiversity that relies on the habitat for oxygen, protection and nutrients.

### Mediterranean Sea ecology altered by invasive species

### The Mediterranean Diet

Depending on the climate scenario RCP: Representative Concentration Pathway and the season, a rise in temperature from 2 to 6 °C by 2100 is expected in the Mediterranean for summer temperatures: Fig. Additionally, the temperature and rainfall pattern for a Csa or even a Csb climate can exist as a microclimate in some high-altitude locations adjacent to a rare tropical As with dry summers, typically in a rainshadow region, as in Hawaii.

### The Mediterranean Diet

It is re-using beer waste streams to reduce the environmental impact of brewing, an after effect of beer that is perhaps less widely considered. In North America, areas with Csc climate can be found in the , , and ranges in Washington, Oregon and California.

### Environment

Tourism often concentrates in areas of high natural wealth, causing a serious threat to the habitats of endangered Mediterranean species such as sea turtles and monk seals. It is estimated that by 2025 one out of every two countries in the Mediterranean will be using freshwater resources in excess of their regeneration rates.
