## Isolated systolic hypertension: A health concern?

Age, frailty and other comorbidities like diabetes and chronic kidney disease complicate this matter even further. The diastolic bottom number tends to decrease, but the systolic top number tends to increase. The arterial stiffness is manifested clinically by the widening of pulse pressure, which is seen commonly in the elderly patients ,.

## Hypertension and Cardiovascular Disease in the Elderly

Blood pressure is closely linked to heart health. Moderate exercise can lower your risk of high blood pressure. When should I seek immediate care? In a frail patient, treatment and BP goals should be individualized.

## High Blood Pressure

Epidemiology of adverse drug reactions in the elderly by drug class. For healthy adults who are age 65 or older, the recommended treatment goal for systolic pressure is also less than 130 mmHg.

## High Blood Pressure: Guidelines and Treatments for Seniors

Blood pressure often increases with age. Ask your doctor what your optimal weight is, given your height, gender, body type, and age.

## Hypertension in Older Adults

Studies comparing equipotent doses of ACE inhibitors have shown comparable efficacy and, although debatable, the benefits are believed to be a class effect.

## High Blood Pressure

Instead of preventing the formation of angiotensin like ACE inhibitors , ARBs block the hormone from working in the body. Not only is hypertension considered the most important risk factor for strokes, it is now being linked as a risk factor for dementia as well.
