ASTM D5312(freezing/thawing rock) map with freeze thaw cycles for places outside US?

For the area of Budapest, Hungary about four wet freeze—thaw cycles actually occur per year Fig. Except for the pore space investigations, all petrophysical analyses were performed in three orthogonal directions.

Influence of wet

Freeze

Both fine- and coarse-grained limestone samples FL, CL were used for these test specimens Fig. Adding hydraulic lime accelerates curing, but often reduces the frost durability of mortars.

Freeze

Length change measurements are a useful tool for this purpose Thomachot and Matsuoka.

Various drawbacks make this test unreliable, especially for the comparison of different mix designs or for evaluating concrete durability.

Engineering Properties of Stones and Tests on Stones

The lapillus consists of highly porous solidified lava fragments or pumice. Each concrete mix is poured into cylinders using ASTM C31, Standard

Practice for Making and Curing Concrete Test Specimens in the Field and tested in compression using the procedures in ASTM C39, Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.

FHWA Freeze

Weight of the specimens was measured before and after each freeze cycle.

ASTM D5312 / D5312M

I haven't had luck finding a reference for the north that follows this line of thinking.
