The lower animals; living invertebrates of the world : Buchsbaum, Ralph Morris, 1907

They are: Polyp and Medusa.

The lower animals; living invertebrates of the world : Buchsbaum, Ralph Morris, 1907

The largely taxon-based chapters are supplemented by essays on topical aspects relevant to modern-day EvoDevo research such as regeneration, embryos in the fossil record, homology in the age of genomics and the role of EvoDevo in the context of reconstructing evolutionary and phylogenetic scenarios.

The lower animals; living invertebrates of the world : Buchsbaum, Ralph Morris, 1907

The Medical-Biology Committee of the CNR-Rome and the University of Milan also supplied interest and support for the organization of this Meeting. The Polyp stage is used for asexual reproduction via budding producing identical gametes, and the Medusa stage is used for sexual reproduction producing genetic variation in gametes.

The lower animals; living invertebrates of the world : Buchsbaum, Ralph Morris, 1907

In addition, the Acoelomorpha, Xenoturbellida and Chaetognatha are examined, including their currently hotly debated phylogenetic affinities. Volumes I and II of this series published by Wiley have given detailed accounts of the structure, origin, composition and physiology of female and male gametes and also provided some information on the mechanisms controlling their production. We, therefore, considered it useful to organize a meeting specifically devoted to the study of the invertebrate and lower vertebrate collagens.
