This was a rather drastic way to eliminate a problem, but effective.

108760053

Sheep had to be slaughtered at the farm Brautarholt in 1987, due to scrapie. He and his team succeeded in isolating the Maedi virus and also proved that the same virus caused Visna. PrPSc was detected in lymphoid tissues at preclinical time points, and deer necropsied after 28 months post-inoculation had clinical signs, spongiform encephalopathy, and widespread distribution of PrPSc in neural and lymphoid tissues.

Mast stresses that even though such cases are rare, we must constantly be on guard against the disease. Because it is not uniformly used, it is likely that approximately 80% of the pigs grown in the United States never receive MBM.

Commission of the European Communities. Coordination of Agricultural Research

In particular the US data do not clearly exclude the possibility of human sporadic or familial TSE development due to consumption of venison.
