Treatment for Rheumatic Heart Disease

As such, stringent blood pressure control and reduction of proteinuria are obligatory. They could not stop the damage to his heart. In 1957, Dr Peter Allen, with the assistance of Drs Phil Ashmore, Bill Trapp, and Ross Robertson, performed the first open heart procedure at Vancouver General Hospital, closing an atrial septal defect in a 9-year- old boy.

Adult Congenital Heart Disease Treatment

A study of hibernation in relation to the technique of hypothermia for intracardiac surgery.

Treatment for Arrhythmogenic Right Ventricular Cardiomyopathy

In some cases, the infection may have been too mild to have been recognized, or it may be gone by the time the person sees a doctor. Of note, arrhythmias are closely related to HF symptoms and may be the first clinical manifestation of HF. The flow through these arterial shunts was difficult to control and pulmonary hypertension was a significant risk.

Diagnosis and treatment of adult congenital heart disease

Canadian doctor Wilfred Bigelow determined how to use total body hypothermia for open heart surgery in 1953, and the first open heart procedure in Canada was performed by Dr John Callaghan in Edmonton in 1954.

History and evolution of the treatment of adult congenital heart disease
