The Past, Present and Future of Sheet Music

Different rhythms will be required for the next few words. The MNMA Forum was initiated in October of 2004.

A proposal for a new notation to all music educators! FastGram : MusicEd

This is just another example of how isomorphic solfà makes music theory easier to learn, by exposing rather than hiding the consistent fundamentals of music theory. This inconsistency between instruments is yet another impediment to teaching, learning, and playing musical instruments.

6

The teacher must make it clear that some of the vocabulary words in this chapter are new, and today they will learn these new words in a unique way — they will learn the words by using musical rhythms.

MNMA: Music Notation Modernization Association

Meloz Music Tablature by Jerald Lepinski See criterion , and comment about Klavar above. Constructing those combinations is trivial to those versed in the musical arts, so their construction is neither discussed not claimed herein. An sign may call for additional notes to be played within the value of a note.

Music Notation

All but one made the first ledger line C as in traditional notation. The musical possibilities of 17-ET and 19-ET have remained largely unexplored, at least in part due to the inability of traditional musical notation and instruments to express them consistently. I think it likely that a notation system superior to any of the 37 studied in this test can, and eventually will, be invented.

RESEARCH MATERIALS AND SOME CONSIDERATIONS General observations on proposals of music notation reform

The tonic indicator is the only thing that changes. The note-name C placed on the Do-line is an alternative embodiment of the tonic indicator,

indicating that Do is the tonic—that is, the song is in a major key—and that the pitch class associated with Do is C. Hass notation uses a five-line, pitch-proportional chromatic staff whose lines are spaced three semitones a minor third apart.

A. Lines: Dashed Archives

Particularly, an isomorphic keyboard is described which includes tonic solfà names on its buttons. The concept of isomorphism is also applicable to scales that divide the octave into more or fewer than twelve semi-tones.

6

Furthermore, the notation system allows for the presence of more than one staff, and in such a case, the more than one staves can be stacked. And this in turn, allowed the professional to buy more sheet music. Can be incrementally modified programmatically Can be styled and highlighted programmatically Dispatches element-specific notifications of user interaction with score The above requirements are roughly identical to the requirements that have driven the construction of the , a platform- and language-neutral interface for building, changing and interacting with structured documents.
