USGS Professional Paper 1151

Total production from the vein since its discovery in 1979 has been 10,000 tons of an average 10 percent ore-grade rock sphalerite , resulting in 1,000 tons of zinc concentrate. The formation thins sharply and is locally absent in the area north of the Kentucky River fault system.

Kentucky 1

The basal 20 ft of the Grainger contains numerous siderite nodules. In Virginia and West Virginia, the lower part of the Newman is called the Greenbrier Limestone. Tape measure is 2 meters.
