Database Programming with C/C++

As an example call detail records from cell phone companies, satellite imagery data and face-to-face survey data have to be corroborated together for the better and less-biased analysis.

Database Programming with C/C++

With the help of these wireless communication services, we can transfer voice, data, videos, images etc. It is difficult to predict the maximum number of messages that might be exchanged during this situation.

What is Fault Tolerance?

This paper presents a case study for agriculture to discuss the opportunities and challenges for deploying big data techniques for the development of farmers.

Data Communication Network

Unlike classification supervised learning, which strictly and discretely tells the class of an example, relations or associations among various variables in an example database are considered in association rule learning. There should be centralized data storage facilities under the supervision of technological savvy personnel that understand the threat of security breach in the data.
