

# Archaean lode gold deposits of Canada: part I, a synthesis of geochemical data from selected mining camps, with emphasis on pattern alteration

University of the Witwatersrand - Structural geometry of orogenic gold deposits: Implications for exploration of world

Description: -

-

Presidents.

Presidents -- United States -- Biography -- Juvenile literature.

Harrison, William Henry, 1773-1841.

Harrison, William Henry, 1773-1841 -- Juvenile literature.

Children -- Health and hygiene -- Indonesia -- Bibliography.

Children -- Indonesia -- Mortality -- Bibliography.

Infants -- Health and hygiene -- Indonesia -- Bibliography.

Infants -- Indonesia -- Mortality -- Bibliography.

Experimental films -- Criticism and interpretation

Human rights.

Civil rights.

Equality.

Social classes -- Sweden.

Electric networks.

Criticism.

English literature -- 19th century -- History and criticism.

Browning, Robert, 1812-1889.

Milton, John, 1608-1674.

Marlowe, Christopher, 1564-1593 -- Criticism and interpretation.

Shakespeare, William, 1564-1616.

Shakespeare, William, 1564-1616 -- Characters.

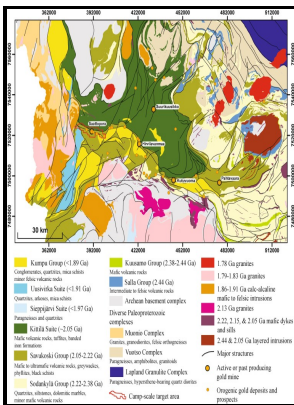

Spenser, Edmund, 1552?-1599 -- Criticism and interpretation.

and localities.

The mean daily range in temperature of the surface water of the ocean is not more than i F.

## Volcanic framework and geochemical evolution of the Archean Hope Bay Greenstone Belt, Nunavut, Canada

In: Geological Fieldwork 1994, British Columbia Ministry of Energy, Mines and Petroleum Resources, British Columbia Geological Survey Paper 1995-01, pp.

## Structural geometry of orogenic gold deposits: Implications for exploration of world

To the curious mind, East Kootenay is also a landscape full of questions. The ores in many disseminated-stockwork and crustiform vein deposits are refractory. This fold is less noticeable than the subsidiary folds parallel to the diverging limbs.

**Volcanic framework and geochemical evolution of the Archean Hope Bay Greenstone Belt, Nunavut, Canada**

During the glacial maxima the high peaks of the range probably rose above the general level of the Cordilleran ice-sheet.

**Cordierite: Mineral information, data**

## **Bulletins**

On 44 level, 1800 m below surface, the C128 series shows very little or no variation within the limits of measurement: all whole-rock values remain at about 11 to 12. Within and part of the succession are the Cottonbelt lead-zinc-magnetite layer and the Mount Grace carbonatite tuff. In: Geological Fieldwork 1992, British Columbia Ministry of Energy, Mines and Petroleum Resources, British Columbia Geological Survey Paper 1993-01, pp.

## **Volcanic framework and geochemical evolution of the Archean Hope Bay Greenstone Belt, Nunavut, Canada**

Exploration is also ongoing for precious and base metals, mostly in veins and stockworks, SEDEX, VMS, stratabound and carbonate replacement, and skarn deposits. Uninterpreted geophysical measurements and geochemical and mineralogical analytical data from samples collected during the summer field seasons from 2007 to 2010.

## **GeoFiles**

A total of 67 tracts within the study area were given relative ranks that reflected their potential for the discovery of new metallic and industrial mineral resources in the future. Native gold occurs along fractures in vein quartz and as blebs on the surface of the pyrite cubes and enclosed entirely within them.
