To determine risk factors for a disease, evidence based research and studies are needed for evidence, with longitudinal studies giving the most statistically significant outcomes and the best reliability for determining risk factors. The practitioner can also perform a plaque index to indicate to the patient areas of plaque they are not removing on their own.

Periodontitis

The main purpose of the interdental gingiva is to prevent food impaction during routine mastication.

The New Global Classification System for Periodontal and Peri

In time, these pockets become deeper, filling with more bacteria. A periodontist is a dental specialist who has received additional training in the prevention, diagnosis and treatment of periodontal gum diseases. Periodontal disease patients with diabetes mellitus also have poorer healing abilities than those without diabetes, and hence are at an increase risk for more severe diseases if blood glucose control is poor and when healing abilities are affected by systemic disease.

Introduction to Periodontics

Anyone else have any input on that statement. Audience: The primary target of this book is the student population, but I believe that it can be used by hygienists currently practicing and dentists who would like to understand periodontal disease more fully.
