## Hydrologic and water

Assessing the siltation on a river is a particularly daunting task, and one that traditional data collection methodology is poorly equipped to do. The Team did not identify any unoccupied areas in this

Filesize: 25.107 MB

subbasin that may be essential for the conservation of the ESU. Worcester, Massachusetts, metrop 91-9665 wage survey.

## United States. Bureau of Land Management

Hydraulic conductivities calculated during the 2006 to 2007 groundwater investigation ranged from 2. The Team concluded that all of these occupied areas contain spawning, rearing, or migration PCEs for this ESU and identified several management activities that may affect the PCEs, including agriculture, dams, forestry, and roadbuilding. Schneider and Geological Survey U.

The 2006 monthly withdrawal data for users in this area are provided in Table 2.

50 CFR 226.204

The Team did not identify any unoccupied areas in this subbasin that may be essential for the conservation of the ESU.

#### **Federal :: Water Quality Standards for Kansas**

This information is now generally available from these agencies and via the internet California Spatial Information Library, 2004; Interior Columbia Basin Ecosystem Management Project, 2003; Regional Ecosystem Office, 2004.

#### **Federal :: Endangered and Threatened Species; Designation of Critical Habitat for 13 Evolutionarily Significant Units of Pacific Salmon (*Oncorhynchus*)**

The Teams examined each habitat area within the watershed to determine whether the stream reaches or lakes occupied by the species contain the physical or biological features essential to conservation. Critical habitat does not include occupied habitat areas on Indian lands.
