## USDA publishes cattle and beef pricing report

Many citrus orchards were being taken out of production. Subsoil and topsoil conditions were adequate. Cattle remained in decent body condition with pasture conditions improving.

### Cattle

In a statement accompanying the release, Agriculture Secretary Sonny Perdue seemed to acknowledge that critics of how the cattle markets functioned would not be satisfied with the report. But this year, demand is higher as Americans and the economy emerge from a year-long pandemic. This is the case after between 110 and 250 days.

### Cattle

Alfalfa fields looked good as well with

Filesize: 55.53 MB

most farmers irrigating once, rather than twice between cuts.

## Market Reports

This wide crop progress range was reflective of weather and soil conditions. Sorghum looked excellent and was now at coloring stage.

## **USDA ERS**

The El Paso County Water Improvement District No. EAST Hay production was in full swing.

## **Market Reports**

A few areas received some scattered showers, but more rain was needed to get hayfields and pastures growing.

## **Beef and cattle are on the rise**

Computer programming could be implemented to more readily track negotiated cash sales as a percentage of company or plant purchases. Farmers were in full swing preparing fields for the upcoming crop year. Crops continued to progress, and corn and sorghum were drying down.

## **USDA publishes cattle and beef pricing report**

Cotton planting halted due to very limited soil moisture, but producers continued to prepare fields. Corn fields were in dent stage, and sorghum was turning color. Small amounts of grain sorghum were harvested, but there was a reluctance to apply spray herbicides due to rain in the forecast.
