Le niveau de l'eau et le débit varient sur la Restigouche CIEU

This was my first theoretical paper, which led me to combine observations and theories in several publications during the remainder of my career.

pleasure of writing, being published, appealing to readers, and contributing to the advancement of knowledge

One important aspect is that the co-authors of my two- or three-author publications were often specialists of other disciplines or fields than mine. I could not have imagined in 1980 that I would attend many Liège Colloquia over the years, become part of the organization of the colloquium during the 1990s, and receive an honorary doctorate from the University of Liège in 1997.

Le zooplancton de la Baie des Chaleurs en 1955 (1959 edition)

The community needs good textbooks, and I found that writing them was a wonderful, rewarding experience. Philippe, who is a French marine physical chemist, had written a very original book on the Earth System entitled Les attracteurs de Gaia.

168748616

I explained above that Numerical Ecology resulted from the independent invitations, in 1975, of Pierre Legendre and me to a workshop at the end of which we decided to write the textbook together.

Zooplancton de la Baie des Chaleurs en 1955 (1963 edition)

This invitation came as a surprise given that I had never worked on hydrothermal systems, but it was explained to me that I was expected to provide expertise on data synthesis.

Zooplankton de la Baie des Chaleurs en 1955 (1963 edition)

The broad, coherent approach of textbooks explains why some of them become very influential, probably more than any scientific paper.

Bibliographie avant 1988 régulièrement mise à jour et constituée de 3914 publications scientifiques (descripteur , synonymies , morphologie , dimensions et sélection pour la géographie et l'écologie)

For example, authors of novels have reported that characters in some of their books had acquired a life of their own as the writing of the book progressed.
