## Geology of South Africa

Apart from the discovery of the offshore , exploration intersected oil-prone source rocks in boreholes, of merely five wells until 2004. Dinoflagellate cyst record of the deep-sea Cretaceous Tertiary boundary at Uzgruň, Carpathian Mountains, Czech Republic, 257—273.

## An overview of the geology of the Transvaal Sequence and Bushveld Complex, South Africa

These failed or fossil rift basins are usually perpendicular to the rifted continental margin.

## Fossils Dinoflagellates from the Northern Border of the Douala Sedimentary Sub

The relative abundance of muscovite and biotite in the studied sandstones show that the source rock is micaceous in nature, perhaps of felsic igneous rocks or metamorphic rocks. This is the opposite of the upward-sweeping braids that the young-men-on-the-lookout wear.

## An overview of the geology of the Transvaal Sequence and Bushveld Complex, South Africa

. Hence, four lithological units were delineated made up of dark to grayish shales, fine, medium and coarse sandstones.
