

Effects of parent material, international land differences, and time since clearing on some physical and chemical parameters, and variability of three soils groups of the Fraser lowland, British Columbia and Washington State

Huxley College of Environmental Studies, Western Washington University - Effects of parent material, international land differences, and time since clearing on some physical and chemical parameters, and variability of three soils groups of the Fraser lowland, British Columbia and Washington State (1986 edition)

Description:-

Clearing of land -- British Columbia.

Clearing of land -- Washington (State)

Soils -- British Columbia.

Soils -- Washington (State) Effects of parent material, international land differences, and time since clearing on some physical and chemical parameters, and variability of three soils groups of the Fraser lowland, British Columbia and Washington State

Problem series (Huxley College of Environmental Studies)

Problem series - Huxley College of Environmental Studies, Western Washington University Effects of parent material, international land differences, and time since clearing on some physical and chemical parameters, and variability of three soils groups of the Fraser lowland, British Columbia and Washington State

Notes: Includes bibliography.

This edition was published in 1986

Effects of parent material, international land differences, and time since clearing on some physical and chemical parameters, and variability of three soils groups of the Fraser lowland, British Columbia and Washington State

Dogfish catches were patchy throughout the entire period and showed a broad distributional range along the Washington and Oregon coasts. Dogfish consumed a variety of prey, including both pelagic and benthic taxa, and with increasing size exhibited a shift in their diet to more fish and larger prey overall. Effects of parent material, international land differences, and time since clearing on some physical and chemical parameters, and variability of three soils groups of the Fraser lowland, British Columbia and Washington State (1986 edition)

. Here faculty development programs can remind teachers to emphasize their expectations for students, help familiarize new instructors with student resources offered by the college or university e. Around the Columbia River plume, dogfish catch per unit of effort was significantly related to salinity and surface temperature patterns, but not to chlorophyll concentrations.
