This can be linked back to the issue of female police officers and the question of whether they are put under more stress when acting as an authority figure. The effects that these substances have on the body will not help to reduce the symptoms but ultimately contribute to them.

**Development of Maladaptive Coping: A Functional Adaptation to Chronic, Uncontrollable Stress**

Coupled with evidence that psychosocial interventions lead to predicted changes in biological markers of the HPA axis. Developmental Pathways to Psychopathology Mental and physical health problems are stratified along a socioeconomic gradient and across racial divides.

**Frontiers**

Following the analysis of the specific stress instruments found in the literature review, we decided to translate and validate a Portuguese version of the Police Stress Questionnaire for operational stress. Unidimensional and Second-Order Models A single latent model where the factor of operational police stress loads on all 20 items presented a poor fit.
