

Molecular & immunological aspects of parasitism

American Association for the Advancement of Science - Molecule

Description: -

- Parasitic diseases -- Immunological aspects.
Parasitic diseases -- Molecular aspects.Molecular & immunological aspects of parasitism

- no. 91-01S.
AAAS publication ;
no. 91-01S
Publication ;Molecular & immunological aspects of parasitism
Notes: Includes bibliographical references and index.
This edition was published in 1991

Filesize: 60.58 MB

Tags: #Molekule

Molecular Matters

The resulting DNA technology became one of the most active branches of molecular biology because it allows the manipulation of the genetic sequences that determine the basic characters of organisms. · Primary cells should be used whenever possible to confirm findings in cell lines.

Molecular Medicine

As a result of the significant disruption that is being caused by the COVID-19 pandemic we are very aware that many researchers will have difficulty in meeting the timelines associated with our peer review process during normal times. A pair of shared electrons covalent bond may also be shown as a single dash.

Dr. Barbara Sturm

The membrane is then exposed to a labeled DNA probe that has a complement base sequence to the sequence on the DNA of interest.

Homepage us

In this series of reviews, we take a look at the molecular basis of neural disorders. In like , the molecules can only. These studies involve the use of a wide range of modern techniques in molecular biology, genomics, proteomics, imaging and electrophysiology.

Molecular Manipulation

DNA samples before or after restriction endonuclease digestion are separated by gel electrophoresis and then transferred to a membrane by blotting via. By exploring and adopting new innovations and technology advances, I will strive to ensure Molecular Brain is the best place to publish your discovery in brain science.

Molecular Medicine

The describes the process in which DNA is transcribed into RNA, then translated into protein. Molecular Brain is an open access, peer-reviewed

journal that considers manuscripts on all aspects of studies on the nervous system at the molecular, cellular, and systems level providing a forum for scientists to communicate their findings. Manuscripts submitted to Molecular Medicine should describe the implications of the results for human disease and medicine, at a level approachable by our broad audience.
