## An account of the late improvements in galvanism

Having tried the hearts of several calves and dogs, I could not observe any decided motion in the ventricles; but I remarked that the Galvanic power exercised a strong action on the auricles. I then combined the different parts of these three pullets in such a manner, that the head of the second was joined to the foot of the first, and Pg 60 the head of the third to the head of the second.

## George Foster and the Frankenstein connection

In my opinion, we have not yet a sufficient number of data to determine this point. A very sensible gnashing of the teeth was produced, and all the muscles performed, in a surprising manner, the same motion as is exerted during the time of mastication. Fay found that hypothermia is bacteriostatic, reduces inflammation and edema, and, when applied locally to cutaneous cancer metastases, produces a marked tendency toward tumor regression, infection clearance, and slow healing, with subsequently more pliable scars greatly reduced contractures.

Used with permission from Bildarchiv Preussischer Kulturbesitz. But will his Big Brothers leave Lukashenko to fight out this losing fight? I then performed with the new apparatus of Volta the experiments which Galvani had made with artificial electricity alone. I observed the same result with the pile.

My nipples are like the teats of a rain-god. After these experiments on the head, I proceeded to the trunk of the second criminal, which I conceived to be most proper for my purpose. However, Lukashenko is not an alternative to the Russian tanks.

Of covered buttons so swollen in their buttonholes that I had to be cut out of my dress yesterday? Oken argued that polarity is the first and only force in the world; that galvanism or electrical polarity is therefore the principle of life; and that organic life is galvanism in a state of homogenous mass. A ligature was placed loosely around the middle of the crural nerves, and one of these nerves at the ligature applied to the corresponding muscles: strong contractions ensued; which, however, did not take place, when the ligature was drawn tight, at the insertion of the nerves into the muscles of the thigh.
