RE: water retaining design Structural 27 Feb 01 15:48 I agree with Ron - it depends what the structure is to hold. Unfortunately, the improvements are not as extensive as would have been hoped, partly because much research to corroborate some of the proposed new theory is still ongoing. I am of the opinion that stability checks are strictly for walls designed as pure cantilever walls.

Through his membership of the SA Association of Arbitrators he has experience in the inspection and diagnosis of concrete defects, and in the settlement of disputes. Significant changes Some of the most significant changes are as follows. Not sure there is a direct document equivalent.

### DESIGN OF LIQUID RETAINING CONCRETE STRUCTURES

Throughout this book, it is assumed that water is the retained liquid unless any other qualification is made. Temperature checks should be done at sites once every concrete truck reached the site. The third edition of this book, whilst adopting a similar structure to the first two editions, has

attempted to reflect this more theoretical approach.
