It should be recalled that from the days of Hipparchus until modern times there were no such things as trigonometric ratios. Trigonometry, like other branches of mathematics, was not the work of any one man, or nation. The second book of the Sphaerica describes the application of spherical geometry to astronomical phenomena and is of little mathematical interest.

Euler went to great pains to lay out facts and to explain. How quickly we forget, beneficiaries of electronic calculators and computers for fifty years.

**EULER, Leonhard (1707)**

C'est en se fondant sur les travaux d'Euler que Lagrange développera ses recherches. Albatenius 853-929 AD discovered the reciprocal functions of secant and cosecant, and produced the first table of cosecants for each degree from 1° to 90°.
