How Wild Animals Are Hacking Life in the City

This is consistent with the findings of previous studies, which shown that childhood nature experience positively correlates with preference toward animals among children Zhang et al. Mammal diversity and metacommunity dynamics in urban green spaces: implications for urban wildlife conservation.

Urban beasts: how wild animals have moved into cities

One ferret was reported positive for SARS-CoV-2 in Slovenia.

Feral Cities: How Animals are Going Urban Like Never Before

At this time, there is no evidence that animals play a significant role in spreading the virus that causes COVID-19. Rhesus macaques, cynomolgus macaques, grivets, and common marmosets can become infected with SARS-CoV-2 and become sick in a laboratory setting.
